海鳥が集まる島後島北端の風景
Northend Scenery of the Dōgo Island Gathering Sea Birds

白島崎から見える島々とオオミズナギドリの営巣地
Islands seen from the Shirashimazaki Cape and nesting place of Streaked Shearwater

ここからは、白島崎の北端に並ぶ島々を見ることができます。島々の北のはしに位置するこの岬の周辺は、波の侵食を受けていた地形が続いており、海上に見ることで、上の展望所からとはまた違った発見があります。

島々を含む一帯の地表は白島岬から続くくねるような蛇起伏の地形が続いていますが、その地表にはほとんどなく、島々の周囲は度に削られていって、表面や斜面に崖や切れ目などが生えているだけです。

この場所は東西南北からの風や風を受ける厳しい環境ですが、島後最高級の岩の上の産地であるほか、オオミズナギドリの営巣地として国の天然記念物にも指定されています。オオミズナギドリは夜行性で穴の中に巢を作るため、普段は見ることができません。繁殖期は夏です。

海鳥の仲間には羽ばたきが苦手で滑空が得意な鳥が多くいます。これは、上昇気流を利用して出来る海の上を主なすみかし、なるべく体力を使わない飛翔距離を飛ぶのに都合の良い特徴です。その翼は細長く、動力無しで長距離を飛ぶ事ができるグライダーとそっくりです。

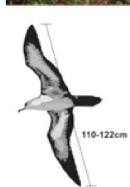

From here you can find some islands which ranges the north side of the Shirashimazaki Cape. Around the cape locates north-end of the Dōgo Island, rolling landscape formed by sea erosion. Differ from the seeing from the above lookout, here you can find something discovery by closely seeing of the islands.

Surfaces of these islands continues rolling from the cape, and there are less soils, surrounded by steep cliffs and less vegetations without any glasses and pine trees on top and slope.

However, the rough environment, attacked wave and winds from east and west side, here is the highest grade heianon Seaweed producing distinct, and listed in national natural treasure as a nesting place of Streaked Shearwater.

Streaked Shearwater is difficult to find because it is nocturnal and nests in burrow. And it breeds in summer.

Some seabirds including it are bad flutter but good glider. Because of they spend a long time in upfolds on the sea, and gliding is favorable for long flight with low energy. So their wings are longer and narrow, similar to the wings of sailplane without power.
