

high
alert!

Beware of Highly Pathogenic Avian Influenza!

To prevent outbreaks, it is important that each employee takes thorough measures!

① Prevent wild birds, rats and other wildlife from entering

- Reinforce **cleaning and disinfection** on the farm and around the poultry houses.

Thoroughly disinfect area near ponds etc!

- **Inspect and check** poultry houses, etc. for **wildlife entry routes**,
If any holes, etc. are found, inform the Rearing Hygiene Manager

Damage to poultry house wire mesh.

Holes in poultry house walls

Cats can also get in through gaps in the egg collection system

② **Enforcement of disinfection** when entering and leaving the poultry house; and ensuring that **boots are changed**.

Installation of dedicated boots

③ **Boots** should be **thoroughly cleaned and disinfected**, **Disinfectants in disinfection tanks** etc. should be **changed daily** (or **whenever they become dirty**).

Clean and then disinfect.

Replacement of disinfectant

Carefully observe the daily health of your poultry and if you find any abnormalities, Immediately contact the nearest Livestock Hygiene Service Centre

Ministry of Agriculture, Forestry and Fisheries website for, 'Information on avian influenza' →.
